Enlight Lab - Internal IT Support Handbook

Document ID ELAB-IT-HB-001 | Version 1.0 (sample) | Owner: IT and Security Operations | Audience: all employees, interns and contractors | Classification: Internal

Note: This is a SAMPLE document for demonstrating an internal IT support RAG assistant. The company profile in Section 1 is based on public information from enlightlab.com. All internal processes, SLAs, tool names and policies are fictional examples.

1. Company Overview

Enlight Lab is a custom software engineering and AI consulting company led by Dhananjay Goel, Founder and Technical Lead. It helps founders and technology leaders build new products, modernize legacy systems and put AI to work. Service lines: **Build** (SaaS, MVPs, web and mobile apps), **Modernize and Scale** (cloud migration on AWS, Azure, GCP; APIs; integration), **AI Copilot** (AI agents, RAG over company documents, automation) and **Technical Leadership** (fractional CTO, architecture reviews). Industries: healthcare, fintech, insurance, real estate, education, travel, e-commerce and startups. Client code and IP belong 100% to the client and are deployed to the client's own cloud, so strict access control and data handling are core IT duties.

2. IT Helpdesk and Ticket Priorities

Channel	Details
Portal / Email	Service desk portal on the intranet; it-support@enlightlab.com (all requests, creates a ticket ID such as ITS-10452)
Chat / Urgent	#it-helpdesk for quick questions; #it-urgent for P1 only (24x7 duty engineer). Hours: Mon-Fri 9:00 AM - 7:00 PM IST

Priority	Definition	First response	Resolution
P1 Critical	Security incident, lost/stolen device, company-wide outage	15 min	4 hours
P2 High	One user cannot work (no laptop, email, VPN or repo access)	1 hour	1 business day
P3 Medium	Degraded service, software install, access change	4 hours	3 business days
P4 Low	How-to questions, cosmetic issues	1 business day	5 business days

Include in every ticket: name, employee ID, project, exact error or screenshot, device asset tag (format ELAB-LT-0000) and business impact.

3. New Joiner Onboarding

When	Action	Owner
T-7 working days	HR raises the New Joiner Request (name, role, manager, joining date, laptop preference).	HR
T-5	Manager submits access list (tools, repositories, cloud, client projects). IT reserves or orders a laptop (procurement 5-7 working days).	Manager / IT
T-3	IT creates the company email and identity; account stays disabled until Day 1.	IT
T-2	Laptop imaged, enrolled in device management, disk encrypted, asset-tagged.	IT
T-1	Welcome email with joining details to personal email. Credentials are never sent by email.	IT / HR
Day 1	ID check, laptop handover and signed Asset Acceptance Form, first login, new password, MFA enrollment, VPN and password manager setup, policy acknowledgement (Acceptable Use, InfoSec, NDA, AI Usage).	IT / HR
Day 2-5	Team tool and repository access granted after manager approval; security awareness training within 7 days.	IT / Manager
Day 30	IT reviews that all granted access is still needed and closes onboarding tickets.	IT

Remote joiners get a pre-configured laptop by tracked courier and complete first login on a video call with IT.

4. Company Email and Domain Account Creation

- **Format:** firstname.lastname@enlightlab.com, lowercase. Duplicates add a middle initial or number (rohan.k.sharma@, rohan.sharma2@). Interns use the same format with (Intern) in the display name; contractors use (Ext) and an account end date.
- **Shared mailboxes:** contact@, it-support@, hr@, careers@, accounts@ (no personal login).
- **Creation steps (IT admin):** 1) verify the approved New Joiner Request; 2) sign in to the identity admin console with MFA; 3) create the user in the right organizational unit; 4) assign the productivity suite licence; 5) add to all-staff, department, location and project groups; 6) set a random temporary password with forced change and keep the account suspended until Day 1; 7) apply the signature template; 8) record in the identity register and

update the ticket.
- **First login:** temporary password is shared in person or on a video call, never by email or chat. User sets a password of 14+ characters and enrolls MFA.
- **Domain and DNS:** enlightlab.com and DNS are managed only by IT. SPF, DKIM and DMARC are maintained by IT. Project sub-domains (project.enlightlab.com) are requested via a P3 ticket. Renewals are alerted at 60, 30 and 7 days.
- **Rules:** auto-forwarding to personal email is blocked; aliases need manager approval; distribution groups need an owner.

5. Laptop and Hardware Issuance

Role	Standard configuration (sample)
Software / AI engineers	14-16 inch, 16-32 GB RAM, 512 GB-1 TB SSD, optional GPU for AI/ML. Windows, macOS or approved Linux
Data / DevOps	32 GB RAM, 1 TB SSD, virtualization support
QA, PM, HR, sales, interns	16 GB RAM, 256-512 GB SSD (interns may get refurbished pool devices)

- **Process:** 1) request via New Joiner Request or Hardware Request ticket with manager approval; 2) IT checks spare stock (same-day allocation) or raises a purchase order (5-7 working days); 3) IT installs the OS image, device management, full-disk encryption, endpoint protection, VPN client and standard software; 4) asset tag applied and recorded in the asset register; 5) user signs the Asset Acceptance Form; 6) IT confirms first login and closes the ticket.
- **Standard software:** browser with password manager, VPN client, office suite, chat and meeting clients; developer bundle (Git, IDE, Docker, Node.js, Python, cloud CLIs) via the software portal.
- **Refresh cycle:** every 3-4 years. Old devices are securely wiped and disposed through an approved vendor.
- **Faulty or damaged (P2):** ticket with photos; repair or replacement, loaner for critical work. **Lost or stolen (P1):** report immediately on #it-urgent; IT remotely locks and wipes, resets credentials and revokes sessions; file a police report if stolen.
- **BYOD:** personal laptops are not allowed for client work. Phones may access email and chat only when enrolled in mobile device management.

6. Access Management and Security Policy

Access type	Approver(s)	Turnaround
Standard team tools	Manager	1 business day
Client source repository	Project lead	1 business day
Cloud staging environment	Project lead and DevOps lead	1-2 business days
Production / client cloud	Project lead, Security, client where required	2-3 business days, time-limited
Admin / privileged	Head of IT and Security	3 business days, reviewed every 90 days

- **Principles:** least privilege, SSO and MFA everywhere, no shared accounts, service accounts owned by a named person and rotated every 90 days. Access reviewed quarterly; accounts inactive for 60 days are disabled.
- **Passwords and MFA:** minimum 14 characters, mandatory password manager, MFA on email, SSO, VPN, code hosting and cloud consoles (authenticator app preferred over SMS).
- **Devices:** auto-lock after 5 minutes, full-disk encryption, OS patches within 7 days (critical within 48 hours), endpoint agent must stay active, USB storage blocked by default.
- **VPN and network:** VPN with MFA is required for internal tools and IP-restricted client environments. Use Wi-Fi SSID Enlight-Staff; Guest Wi-Fi has no internal access.
- **Software requests:** install approved apps from the software portal; other tools need a P3 ticket and Security review if they store company or client data.

Data classification and AI usage

- **Classes:** Public, Internal, Confidential (client code, contracts, credentials) and Restricted (end-user personal, health or financial data, only with explicit approval).
- Use only company-approved AI tools. Never paste client code, credentials or personal data into public or personal AI accounts. AI-generated code must be reviewed and tested. Use anonymised or synthetic data for prototypes. Report suspected leaks as P1.

- **Security incidents** (lost device, clicked phishing link, shared credentials, malware alert) must be reported within 1 hour via #it-urgent and a P1 ticket. IT contains the incident, then a post-incident review follows. IT never asks for your password or MFA code.

7. Troubleshooting (Common Issues)

Issue	Try first	If not fixed
Forgot password / account locked	Self-service reset with MFA; lockout clears after 15 minutes	P2 ticket; IT verifies identity
MFA device lost	Use backup code from password manager	P2 ticket; identity check with manager on video call
VPN will not connect	Check internet, restart client, check system time, update client	Attach VPN log to ticket
Email not syncing	Sign out and in, check mailbox size	Ticket with exact error
Laptop slow	Restart, close apps, install updates, keep 15% disk free	Ticket for diagnostics
No repo or cloud access	Confirm approval email and SSO sign-in	Ticket with repo or project name
Git push / SSH rejected	Check SSH key is added to code host and not expired	P3 ticket to regenerate keys

8. Offboarding

HR raises an Exit Request at least 5 working days before the last day. Manager reassigns repositories, service accounts and documents. On the last day the employee returns the laptop and accessories; IT disables the account, revokes sessions and MFA, removes VPN access and reclaims licences. The mailbox is forwarded to the manager for 30 days, then archived and deleted per retention policy. The returned laptop is securely wiped and re-issued or disposed.

9. Frequently Asked Questions

Q: How do I get my company email ID? A: IT creates it before joining as firstname.lastname@enlightlab.com. You get the temporary password on Day 1 in person or on a video call, then set a new password and enroll MFA.

Q: When will I receive my laptop? A: On Day 1, if HR raised the New Joiner Request 7 working days before joining. If a purchase is needed, procurement takes 5-7 working days.

Q: What do I do on my first day? A: Collect and sign for your laptop, log in, set your password, enroll MFA, install VPN, accept policies and join your team onboarding.

Q: Who approves repository or cloud access? A: Project lead for repositories; project lead plus Security (and client if required) for production or client cloud.

Q: Can I use public AI tools with client code? A: No. Only company-approved AI tools may be used and client code or personal data must never be pasted into personal accounts.

Q: I lost my laptop. What now? A: Report immediately on #it-urgent and open a P1 ticket. IT locks and wipes the device and resets your credentials. File a police report if stolen.

Q: Can I forward work email to my personal email? A: No, automatic forwarding is blocked.

Q: Can I install software myself? A: Only approved apps from the software portal. Others need a software request ticket.

Q: How do I report phishing? A: Use the Report Phishing button or forward the email as an attachment to it-support@enlightlab.com. If you clicked or shared credentials, open a P1 ticket.

Q: Escalation path? A: L1 IT Helpdesk, L2 IT Systems Engineer, L3 Head of IT and Security, then Founder and Technical Lead for client-impacting breaches. HR questions: hr@enlightlab.com.
